

A Tude Sur La Limite Ga C Ographique De La Langue

This timely volume provides a comprehensive account of the natural history of the organisms associated with the deep-sea floor and examines their relationship with this inhospitable environment--perhaps the most remote and least accessible location on the planet. The authors begin by describing the physical and chemical nature of the deep-sea floor and the methods used to collect and study its fauna. Then they discuss the ecology of the deep sea by exploring spatial patterns, diversity, biomass, vertical zonation, and large-scale distribution of organisms. Subsequent chapters review current knowledge of feeding, respiration, reproduction, and growth processes in these communities. The unique fauna of hypothermal vents and seeps are considered separately. Finally, there is a pertinent discussion of human exploitation of deep-sea resources and potential use of this environment for waste disposal.

The Lexicon brings together lexical material from a wide range of published and non-published sources to create an extensive compilation of the vocabulary of Fulfulde as it is spoken in that part of central Mali known as Masina (in Fulfulde, Maasina). The Lexicon is intended primarily for non-Fulfulde speakers who are learning the language at the intermediate or advanced levels and who need access to a comprehensive reference source on Fulfulde vocabulary. Scholars, development workers, and others whose research or fieldwork involves use of the Fulfulde of Masina may find it helpful as well in clarifying nuances of meaning and standardized spelling for the less familiar terms they might encounter. It is also intended that the present work, beyond the matter of organizing vocabulary, will contribute significantly to the expanding lexicographical and linguistic investigations of Fulfulde.

Mémoires sur la mécanique des fluides

Late Ordovician and Early Silurian Stromatoporoid Sponges from Anticosti Island, Eastern Canada

Depuis 1967, année du centenaire de la Confédération, de nombreux épisodes de crise politique et de difficultés économiques ainsi que les événements internationaux ont contribué à la transformation de la société canadienne et continueront de façonner son avenir. En tenant compte de ces diverses difficultés et opportunités rencontrées dans le passé, à quoi ressemble l'avenir du Canada? Dans Réfléchir sur notre passé pour aborder notre avenir, des diplomates, des politiciens, des chercheurs et des personnages en vue dans le domaine des droits de l'homme, dont Phil Fontaine, Michaëlle Jean, Ellen Gabriel, Paul Heinbecker, Bob Rae, Jean Charest et David Suzuki mettent en commun leur sagesse et leur expérience des événements qui ont marqué l'histoire du pays au cours des cinquante dernières années. Réfléchissant au rôle complémentaire à la Chambre des communes du Sénat au Canada, ils examinent des enjeux clés comme la condition des peuples autochtones, les obligations imposées par la Charte des droits et libertés, la reconnaissance des deux langues officielles et les référendums sur l'unité nationale. Les collaborateurs abordent aussi la transformation de l'économie dans un monde numérisé et un système planétaire, le rôle du Canada sur la scène mondiale à une époque de tension croissante, le flot accru de réfugiés, les changements climatiques et l'incertitude entourant l'avenir de l'Arctique, la concurrence scientifique et culturelle sur le marché international et l'avenir de la démocratie parlementaire. Corrigeant les fausses idées à propos du rôle actuel du Sénat et donnant le contre-argument à une réforme radicale du Sénat, Réfléchir sur notre passé pour aborder notre avenir propose de riches perspectives et un aperçu fascinant de l'évolution probable du Canada au cours des prochaines années.

Selected Water Problems in Islands and Coastal Areas serves as a guideline for implementing, at the policy and decision-making level, the rational and economic use of water resources. This book focuses on groundwater management and the possible utilization of desalination facilities, specifically in arid or semi-arid coastal areas. Organized into five parts encompassing 63 chapters, this book begins with an overview of the forecasts of water supply requirements. This text then explores the necessary regulations of both surface and groundwater in coastal areas and islands with limited water resources. Other chapters consider the curative measures in the case of recurring salination by using artificial or increased natural infiltration. This book discusses as well the techniques to be used for artificial infiltration into aquifers using deep wells to avoid clogging. The final chapter deals with the problems of communal installations, water supply, drainage and waste disposal. This book is a valuable resource for engineers.

Much instrumentation has been developed for imaging the trajectories of elementary particles produced in high energy collisions. Since 1968, gaseous detectors, beginning with multiwire chambers and drift chambers, have been used for the visualisation of particle trajectories and the imaging of X-rays, neutrons, hard gamma rays, beta rays and ultraviolet photons. This book commemorates the groundbreaking research leading to the evolution of such detectors carried out at CERN by Georges Charpak, Nobel Prizewinner for Physics in 1992. Besides collecting his key papers, the book also includes original linking commentary which sets his work in the context of other worldwide research.
