Bioethics and the Law takes a multidisciplinary approach that combines legal discussion with jurisprudential, philosophical, and sociological materials. Strong expressions of different points of view highlight debates about bioethical issues. The text underscores the need to mediate between the law's focus on broad rules and the bioethicist's concern with context and detail. Students are required to consider the ethical implications of health care as a business, face the shifting parameters of the provider/patient relationship in healthcare, and understand the role of government in designing and implementing healthcare programs such as Medicaid and Medicare. Bioethics and the Law supplements the traditional focus of bioethics on the interest of the individual with a second focus on the socio-economic developments that shape healthcare. Connecting broad public healthcare issues to concerns of the individual patient/healthcare consumer, the text promotes understanding of unsettling and complex situations and shows the implications of bioethical developments for understandings of personhood. A helpful glossary defines basic terms and several short appendices summarize recent developments in science and technology.

Peter Chaadaev emerges from the pages of history as one of Russia's most provocative and influential thinkers. The purpose of this book is to present the reader with the first English translation of most of his philosophical writings.

During the first half of the nineteenth century Chaadaev incited a violent polemic concerning the historical significance of Russian culture. His ideas concerning Russia's real mission in the world still provoke controversy in the Soviet Union. In fact, no edition of most of his works has ever been published in the Soviet Union until the Gorbachev era. Our English translation with commentaries was done in the conviction that these writings should be made available to the English-reading public. The background material in this book is expository; we have not attempted to write a complete biographical study of Chaadaev, nor have we tried to offer an analysis of Chaadaev's philosophy. The point of view is simply that of two scholars who admire Chaadaev's insights into philosophy in general, and the philosophy of history, in particular; so the background material has been limited to a biographical sketch of Chaadaev and a brief explanation of his major ideas.

Access to oral health care is essential to promoting and maintaining overall health and well-being, yet

only half of the population visits a dentist each year. Poor and minority children are less likely to have access to oral health care than are their nonpoor and nonminority peers. Older adults, people who live in rural areas, and disabled individuals, uniformly confront access barriers, regardless of their financial resources. The consequences of these disparities in access to oral health care can lead to a number of conditions including malnutrition, childhood speech problems, infections, diabetes, heart disease, and premature births. Improving Access to Oral Health Care for Vulnerable and Underserved Populations examines the scope and consequences of inadequate access to oral health services in the United States and recommends ways to combat the economic, structural, geographic, and cultural factors that prevent access to regular, quality care. The report suggests changing funding and reimbursement for dental care; expanding the oral health work force by training doctors, nurses, and other nondental professionals to recognize risk for oral diseases; and revamping regulatory, educational, and administrative practices. It also recommends changes to incorporate oral health care into overall health care. These recommendations support the creation of a diverse workforce that is competent, compensated, and authorized to serve vulnerable and underserved populations across the life cycle. The recommendations provided in Improving Access to Oral Health Care for Vulnerable and Underserved Populations will help direct the efforts of federal, state, and local government agencies; policy makers; health professionals in all fields; private and public health organizations; licensing and accreditation

bodies; educational institutions; health care researchers; and philanthropic and advocacy organizations.
