Experiential exercises tap into students' intrapersonal and body-kinesthetic intelligences, allowing students to "experience" key social studies concepts firsthand. Moving Beyond Icebreakers contains 440 pages packed with insight and ideas about building community, engaging students in learning, and making meetings work. It describes an innovative meeting format and documents over 300 interactive exercises (not just

"icebreakers") that enable readers to:

- * Achieve group goals**
- * Build relationships**
- * Resolve group problems**
- * Teach, lead, motivate, and inspire**

The first 130 pages describe how to use "icebreakers" and other interactive methods to help group members make decisions, create new ideas, solve problems, resolve conflicts, and understand new concepts. In these pages you will find a five-part meeting structure that you can use to become an expert facilitator, following an approach that engages both youth and

adults in meeting the group's goals. You will also find detailed agendas, lesson plans, and scenarios that show how this approach works in the real world. Table of contents: * Why use interactive methods? * Working into interaction * Coping with resistance and fear of failure * The interactive meeting format * Interactive exercises (name exercises, warm-up questions, five-minute springboard exercises, fifteen-minute springboard exercises, in-your-chair springboard exercises, tag-style springboard exercises,

Cool English is a 6-level contemporary version of Join In. It is organized in lesson plans for each class session. These lesson plans give suggestions on different ways of exploiting the activities, plus extra ideas and materials. It includes clear and concise instructions with step-by-step explanations which simplify lesson-planning for the teacher. The guide is interleaved with the Pupil's Book and contains all the tape scripts. The 2 Audio CDs for the teacher contain all the songs and the recordings from the Pupil's Book, as well as the listening tests. The Tests CD contains pdfs of assessment tests for this level.

Survey of Science Specialities Course Description This is the suggested course sequence that allows two core areas of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials within each semester are independent of one another to allow flexibility. Quarter 1: Archaeology The Archaeology Book takes you on an exciting exploration of history and ancient cultures. You will learn both the techniques of the archaeologist and the accounts of some of the richest discoveries of the Middle East that demonstrate the accuracy and historicity of the Bible. You will unearth: how archaeologists know what life was like in the past, why broken pottery can tell more than gold or treasure can, some of the difficulties in dating ancient artifacts, how the brilliance of ancient cultures demonstrates God's

creation, history of ancient cultures, including the Hittites, Babylonians, and Egyptians, the early development of the alphabet and its impact on discovery, the numerous archaeological finds that confirm biblical history. Quarter 2: Geology The Geology Book will teach: what really carved the Grand Canyon, how thick the Earth's crust is, why the Earth is unique for life, the varied features of the Earth's surface-from plains to peaks, how sedimentary deposition occurs through water, wind, and ice, effects of erosion, ways in which sediments become sedimentary rock, fossilization and the age of the dinosaurs, the powerful effects of volcanic activity, continental drift theory, radioisotope and carbon dating, geologic processes of the past. Our planet is a most suitable home. Its practical benefits are also enhanced by the sheer beauty of rolling hills, solitary plains, churning seas

and rivers, and majestic mountains—all set in place by processes that are relevant to today's entire population of this spinning rock we call home. Quarter 3: Cave

Explore deep into the hidden wonders beneath the surface as cave expert Dr. Emil Silvestru takes you on an illuminating and educational journey through the mysterious world of caves. Discover the beautiful, thriving ecology, unique animals, and fragile balance of this little-seen ecosystem in caves from around the globe. The Cave Book will teach you about: a creationary model for how caves form, a history of how caves have been used by humans for shelter and worship, how old caves really are, the surprising world of Neanderthals and their connection to modern humans, how to make a stone axe and about early tools, just how long it really takes for cave formations to form, unusual animals that

make caves their home, examples of how connected caves are to mythology of many cultures, the climate and geologic processes and features of caves and karst rocks, the process by which ice caves form, exploration, hazards, and record-setting caves, how caves form, and features above and below the surface.

Quarter 4: Fossil Fossils have fascinated humans for centuries. But where did they come from, and how long have they been around? These and many other questions are answered in this remarkable book. The Fossil Book will teach you about: the origin of fossils, how to start your own fossil collection, what kinds of fossils can be commonly found, the age of fossils, how scientists find and preserve fossils, how to identify kinds of fossils, how the Flood affected fossil formation, the Geologic Column Diagram, the difference between evolutionists' and creationists'

views on fossils, the “four Cs” of biblical creation, the different kinds of rocks fossils are found in, coal and oil formation. Learning about fossils, their origins, and how to collect them can be both fun and educational.

emergent issues. For the first time, full case studies are included to illustrate extended research and evaluation examples. In addition, each chapter features an extended "ruminations," written in a voice and style more emphatic and engaging than traditional textbook style, about a core issue of persistent debate and controversy.

This book presents thoughts on and experiences with the introduction of Theme-centered Interaction (TCI) into academia. TCI is a systematic didactic, 'living learning' approach originally developed

by social psychologist and pedagogue Ruth C. Cohn. The book explains and introduces the method, attitude and theory of TCI to a broader, higher education audience and relates it to such questions as: How does a teacher in academia achieve a lively and engaging atmosphere in their seminars? How do young academics as leaders-to-be learn how to act socially sustainably in groups? Using practical examples, the book shows how TCI can work in higher education to achieve participation and integration, reflectivity and humane

encouraging international dialogue between researchers and practitioners, often working within isolated traditions, this book discusses perspectives on science education for the gifted informed by up-to-date research findings from a number of related fields. The book reviews philosophy, culture and programmes in science education for the gifted in diverse national contexts, and includes scholarly reviews of significant perspectives and up-to-date research

methods and findings. The book is written in a straightforward style for students studying international perspective modules on undergraduate, but especially masters and doctoral degrees in Science Education and Gifted Education. Gifted education has come to be regarded as a key national programme in many countries, and gifted education in science disciplines is now of major importance to economic and technological development. Despite these national initiatives and

developments, there are very few discussions on gifted education in science from international perspectives. This will be a valued addition to the scholarship in this emergent field.
