Seeds: Ecology, Biogeography, and Evolution of Dormancy and Germination differs from all other books on seed germination. It is an all-encompassing volume that provides a working hypothesis of the ecological and environmental conditions under which various kinds of seed dormancy have developed. It also presents information on the seed germination of more than 3500 species of trees, shrubs, vines and herbaceous species, making this a valuable reference for anyone studying germination. This book delivers information on characteristics of each type of seed dormancy, how each type of dormancy is broken in nature, and what environmental conditions are required for germination after dormancy is broken. It explains how studies should be done to distinguish persistent from transient seed banks, and covers which species should be controlled, propagated, and conserved. Seeds gives the reader insight and guidelines for doing ecologically meaningful studies on the biogeography and evolution of seed dormancy and germination in order to better understand plant reproductive strategies, life history traits, adaptations to habitats, and physiological processes. Evolutionary/phylogenetic origins and relationships of various kinds of seed dormancy A world biogeographical perspective on seed dormancy and germination Ecophysiology of seeds with each type of dormancy Critical evaluation of methodology used in soil seed bank studies Germination ecology of plants with specialized habitat and life cycle types Genetic and maternal preconditioning effects on seed dormancy and germination Guidelines for doing ecologically-meaningful germination studies

Amir en Hassan zijn gevoed door dezelfde min en groeien samen op in de hoofdstad van Afghanistan. Als blijk van hun verbondenheid kerft Amir hun namen in een granaatappelboom: Amir en Hassan, de sultans van Kabul. Maar sultans zijn ze alleen in hun fantasie, want Amir hoort tot de bevoorrechte bevolkingsgroep en Hassan en zijn vader zijn arme Hazaren, in dienst van Amirs vader. Bij de jaarlijkse vliegerwedstrijd in Kabul is Amir de vliegeraar, degene die het touw van de vlieger in handen heeft. Hassan is zijn hulpje, de vliegervanger. Voor jou doe ik alles! roept Hassan hem toe voordat hij wegrent om de vallende vlieger uit de lucht op te vangen. Die grenzeloze loyaliteit is niet wederzijds. Wanneer er iets vreselijks gebeurt met Hassan verraadt hij zijn trouwe metgezel. Na de Russische inval vluchten Amir en zijn vader naar de Verenigde Staten. Amir bouwt er een nieuw bestaan op, maar hij slaagt er niet in Hassan te vergeten. De ontdekking van een schokkend familiegeheim voert hem

uiteindelijk terug naar Afghanistan, dat inmiddels door de Taliban is bezet. Daar wordt Amir geconfronteerd met spoken uit zijn verleden. Zijn voornemen om zijn oude schuld jegens Hassan in te lossen sleept hem tegen wil en dank mee in een huiveringwekkend avontuur. De vliegeraar - de debuutroman van Khaled Hosseini verscheen in 2003 en groeide uit tot een internationale bestseller. Internationaal verscheen deze speciale geïllustreerde editie, met foto's uit Afghanistan. De fotos in deze gebonden uitgave werden in samenwerking met de auteur gekozen.

The Handbook of Ecotoxicology provides a readily accessible, yet critical collection of information on ecotoxicological testing. Now available in a single paperback volume, this handbook represents excellent value. Part A concentrates on techniques, especially those tests used for prediction. Thorough descriptions of the main tests are provided, followed by critical analyses in terms of ease of handling, repeatability and ecological relevance, and finally, an extensive bibliography citing key documents describing test methods and key papers evaluating them. Part B focuses on the toxicants themselves: summarising their ecological effects, describing ways of predicting effects from physico-chemical properties alone, and describing and discussing fate models. The Ciliated Protozoa: Characterization, Classification and Guide to the Literature, Second Edition presents a premature major overhauling of the systematics of the Ciliophora sensu lato, which is considered a separate phylum. This book includes a developed rationale and defined criteria that serve as a basis for the reclassification of the ciliates. Discussions of controversial taxa are provided, including arbitrary but critical resolution of their place in, or rejection from, the new overall system. The ideas concerning the evolution of ciliates, as well as "phylogenetic trees are also covered in this text. This text categorizes the ciliates into three classes—Kinetofragminophora, Oligohymenophora, and Polyhymenophora. This publication is a good source for biologists and students interested in ciliates.
