The Strait of Gibraltar is famous as a major point of passage for Palaearctic birds migrating between their European breeding grounds and their winter quarters in Africa. Clive Finlayson, a native of the Rock and a trained ornithologist, presents a fascinating account of the region and its resident and transitory bird life. The first chapter of the book describes the area, which broadly defined includes the Coto Donana in the north and the Merja Zerga in the south, and

the geographic and climatological characteristics which make it a suitable crossing place. In scope this book goes beyond the strict definition of the Strait and, following Irby's 19th Century work, examines the rich area where Europe meets Africa. The chapters which follow describe in detail the migration patterns of the principal passage species including their origins, destinations and overall numbers, showing how the precise conditions of weather and visibility affect the specific choice of route and timing of the crossing. The breeding and wintering bird

communities are then considered and the ornithology of the entire region summarized. Whether or not you have ever witnessed the thousands of raptors, storks and other birds that may make this legendary crossing in a single day, this book will conjure the spirit of this extraordinary place. Delightful illustrations by Ian Willis complete an important and entertaining book.

**We are not afraid to say that we are fascinated by birds. Flying birds always provoke human admiration. There is this unexplained mysterious feeling that surrounds us when watching birds on the forest trees, in our backyard, at the ocean, sea, or lake. Birds are an infinite treasure of inspiration for humans, waking us up in the morning with beautiful birdsongs. Their**

**little brain is of a size of an unshelled walnut and is associated with intelligent behavior and the same capabilities of humans and apes' mental tasks. When you think about all the animals in the world, you quickly realize that birds are, in fact, among some of the most intelligent creatures we have on earth. Although there are more than ten thousand bird species worldwide, only a handful of them have made the list for the extremely talented and incredibly intelligent. So who are these super intelligent feathered friends? It is**

**difficult to pick one. Perhaps kea, ravens, and crows are equally smart; while macaws, cockatoo, and jays are on the top of any list too. Who knew that an African gray is capable of working out the location of hidden food by using the kind of deduction and elimination skills previously seen only in humans and apes? And as you probably have heard, they are exceptional talkers! Today, we all know that it is bad to imprison birds in cages, but it was not always the case throughout the history. According to Stephen King, “Some birds are not**

meant to be caged, that's all. Their feathers are too bright, their songs too sweet and wild." Due to beautiful poetry and cultural expressions, the flying bird became a symbol of freedom and independence. There are cases of historic acknowledgment of birdcages, especially in the Victorian era. People were listening to birdsongs in cages as it was their radio entertainment outlet. During wartimes, birds demonstrated their unique abilities in courageous heroic efforts to help humans in transferring information through the battlefields. The

*'Living on the Edge' examines the function of the Sahel region of Africa as an important wintering area for long-distance migrant birds. It describes the challenges the birds have to cope with – climate change, of course, and rapid man-made habitat changes related to deforestation, irrigation and reclamation of wetlands. How have all these changes affected the birds, and have birds adapted to these changes? Can we explain the changing numbers of breeding birds in Europe by changes in the Sahel, or vice versa?*
