Commonly used to promote growth in plants, fertilizer is applied to the soil after being obtained naturally or through a chemical process. Due to the fact that natural products are generally more healthy than those that are manufactured, natural fertilizer is often the best type to use. Fertilizer, alone, is designed to provide three major plant nutrients in various proportions. Humans need nutrition in order to grow and thrive as do plants and it is important to make sure that crops receive the proper care and nutrition during their growth process. GRAB A COPY TODAY!

At that time, 70s and the Britannica volumes had been published in the 50s, this particular encyclopedia had a tendency of abbreviating the descriptions and the knowledge about anything about which they

knew nothing! So as nobody was there to tell them about me nature plants and miniature shrubs, which were so common in the mysterious East and Oriental Gardens, they had just written about two paragraphs about them. So I went to the source of more information, father and asked him to elucidate. He immediately explained that bonsai was the Japanese name given to plants, which were fully grown trees, but were miniature. He also explained about little orange trees, which were about 12 to 18 inches in size and were laden with orange fruit. This was very fascinating. We needed bonsais in our garden, I and my younger brother. Like right now.
