‘Sometimes called coining, spooning or scraping, Gua sha is defined as instrument-assisted unidirectional press-stroking of a lubricated area of the body surface that intentionally creates ‘transitory therapeutic petechiae’ representing extravasation of blood in the subcutis.’ Gua sha has been used for centuries in Asia, in Asian immigrant communities and by acupuncturists and practitioners of traditional East Asian medicine worldwide. With the expansion of traditional East Asian medicine, Gua sha has been used over broad geographic areas and by millions of people. It is valuable in the treatment of pain and for functional problems with impaired movement, the prevention and treatment of acute infectious illness, upper respiratory and digestive problems, and many acute or chronic disorders. Research has demonstrated Gua sha radically increases surface microperfusion that stimulates immune and anti-inflammatory responses that persist for days after treatment. The second edition expands on the history of Gua sha and similar techniques used in early Western Medicine, detailing traditional theory, purpose and application and illuminated by science that focuses its relevance to modern clinical practice as well as scholarly inquiry. This book brings the technique alive for practitioners, with clear discussion of how to do it - including correct technique, appropriate application, individualization of treatment - and when to use it, with over 50 case examples, and superb color photographs and line drawings that demonstrate the technique. NEW TO THIS EDITION • New chapter on immediate and significant Tongue changes as a direct result of Gua sha • Research and biomechanisms • Literature review from Chinese language as well as English language medical journal database • New case studies • Over 30 color photographs

This issue of Nursing Clinics of North America, Guest Edited by Sharon Stark, PhD, RN, APN-C, will focus on Victims of Abuse, with topics including: Types of Abuse ; Interpersonal Violence; Child Abuse; Elder Abuse; Bullying; Substance Abuse and Violence; Domestic Violence; Abuse in Nursing Homes; Nurses as Victims of Abuse; Issues of abuse in military deployment and military families; Abusive Behavior in the Workplace; The Relationship Between Abuse and Depression; Meeting the 2015 Millennium Development Goals With New Interventions for Abused Women; Community Services/Prevention; and Educational Considerations.

As many as 20 to 25 percent of American adults“or one in every four people“have been victimized by, witnesses of, or perpetrators of family violence in their lifetimes. Family violence affects more people than cancer, yet it“s an issue that receives far less attention. Surprisingly, many assume that health professionals are deliberately turning a blind eye to this traumatic social problem. The fact is, very little is being done to educate health professionals about family violence. Health professionals are often the first to encounter victims of abuse and neglect, and therefore they play a critical role in ensuring that victims“as well as perpetrators“get the help they need. Yet, despite their critical role, studies continue to describe a lack of education for health professionals about how to identify and treat family violence. And those that have been trained often say that, despite their education, they feel ill-equipped or lack support from by their employers to deal with a family violence victim, sometimes resulting in a failure to screen for abuse during a clinical encounter. Equally problematic, the few curricula in existence often lack systematic and rigorous evaluation. This makes it difficult to say whether or not the existing curricula even works. Confronting Chronic Neglect offers recommendations, such as creating education and research centers, that would help raise awareness of the problem on all levels. In addition, it recommends ways to involve health care professionals in taking some responsibility for responding to this difficult and devastating issue. Perhaps even more importantly, Confronting Chronic Neglect encourages society as a whole to share responsibility. Health professionals alone cannot solve this complex problem. Responding to victims of family violence and ultimately preventing its occurrence is a societal responsibility

This handbook is a condensed, portable, rapid-reference version of Fleisher and Ludwig’s Textbook of Pediatric Emergency Medicine, Fourth Edition, one of the most widely respected books in the field. In a format designed for quick bedside consultation, the Synopsis presents the most essential clinical information from the Textbook’s chapters on life-threatening emergencies, signs and symptoms, medical emergencies, trauma, surgical emergencies, and psychosocial emergencies. Each Synopsis chapter covers evaluation, differential diagnosis, physical examination, and management. The 66 signs and symptoms are in alphabetical order and medical emergencies, surgical emergencies, and trauma are organized by body system.

Recognizing and Reporting Red Flags for the Physical Therapist Assistant will help you develop skills to recognize signs and symptoms that can compromise patient care, It is the first text to present a consistent, three-step model for monitoring patients for red flags relating to neuromuscular and musculoskeletal problems, medical diseases, side effects of medications, and other co-morbidities that may be unknown to the PT. Combining the insights of physical therapist Catherine Cavallaro Goodman and physical therapist assistant Charlene Marshall, this resource is unmatched in providing clear guidelines for finding and documenting red flags. Coverage of warning flags includes red and yellow flags, risk factors, clinical presentation, signs and symptoms, helpful screening clues, and guidelines for communicating with the PT, allowing you as the PTA to quickly recognize the need for any re-evaluation of the patient. Three-step approach to formative assessments of physical therapy patients provides a consistent way to watch for and report on adverse changes such as range of motion, strength, pain, balance, coordination, swelling, endurance, or gait deviations. PTA Action Plans show the clinical application of text material relating to observing, documenting, and reporting red (or yellow) flags to the physical therapist. Clinically relevant information includes the tools that you need to monitor the patient’s response to selected interventions, and accurately and quickly report changes to the supervising PT. Picture the Patient sections address what to look for when assessing or working with patients, especially typical red flag signs and symptoms of emerging problems. Case examples and critical thinking activities connect theory to practice, showing the role of the PTA and how the PTA can integrate clinical observations with clinical reasoning skills so that they can. Cognitive processing-reasoning approach encourages you to learn to gather and analyze data, pose and solve problems, infer, hypothesize, and make clinical judgments, so that you can notify the supervising PT of clients who need further evaluation or may require a referral or consultation with other health care professionals. Summary boxes and tables highlight key information for quick reference. Key terminology is listed in each chapter, which each term bolded within the chapter and defined in a back-of-book glossary. Full-color illustrations and design clearly demonstrate pathologies and processes and make lookup easier in busy clinical settings. An Evolve companion website enhances your problem-solving and decision-making skills with additional case studies, problem-solving questions, and activities, as well as screening tools and checklists. Combined authorship by a physical therapist and physical therapist assistant provides an authoritative and unique voice in the PTA field.

The interpretation of skin lesions in children that may be due to abuse is often not straightforward, and many reports have been published on dermatological disorders and accidental injuries that were unjustly regarded as signs of child abuse. This book describes in detail the cutaneous manifestations of the physical abuse of children and devotes particular attention to differential diagnosis. Careful guidance is provided on the optimal evaluation of children presenting with findings potentially attributable to abuse. The numerous images and detailed background information will develop the ability of the reader to assess and interpret the clinical signs of abuse, and to distinguish these signs from other causes of injury, such as accidents and self-mutilation, and dermatological disorders. “Cutaneous Manifestations of Child Abuse” will be invaluable for pediatric dermatologists, pediatricians, forensic experts, and others who deal with the physical abuse of children.

The doctor, dentist or related professional who treats children has a moral and legal obligation to diagnose correctly suspected maltreatment and to report it to the proper authorities. These obligations may bring the doctor into contact with the child protection system as well as the courts. The practitioner needs to be prepared for court testimony, and a foundation of knowledge about child maltreatment is essential. This book provides unparallelled images to assist the physician and dentist in recognizing, diagnosing, and reporting child abuse and neglect. Written by and for professionals in disciplines ranging from general and child abuse pediatrics, to surgery, emergency medicine, pathology, dentistry, nursing and social work, the book reflects current, and increasing, knowledge in this field. The authors stress throughout the importance of including a broad and representative range of possibilities in their differential diagnoses so that a non-inflicted condition is not labeled child abuse, and an inflicted injury cannot be mistaken for a more innocent condition.

“Provides a step-by-step guide to frequently asked questions concerning the medical aspects of child abuse and neglect. Designed for the nonmedical professional, this guide covers burns, fractures, poisoning, sexual abuse, neglect, substance abuse, and working with medical providers. Includes charts, illustrations, checklists, and resources”--Provided by publisher.

The Education and Training of Health Professionals on Family Violence

Pediatric primary care provides a unique opportunity to tackle child abuse and neglect. In the United States in particular, primary care is a well-established system, and most children have multiple visits, especially in the first few years. There is typically a very good relationship between parents and health professionals, who are respected experts on children. The interested pediatrician, thus, has a remarkable entrée into the workings of a family, its shortcomings, and its strengths. With some knowledge and skill, pediatricians can play a pivotal role, even in a few strategic minutes. We know, however, that some professionals feel very uncomfortable becoming involved in this unpleasant area and may be deterred from taking any action. Understandable as this may be, it can jeopardize a child’s health and safety. Hopefully, this issue of Pediatric Clinics of North America will help make this work a bit easier, albeit not easy. With training and support, pediatricians can equip themselves to be competent and more comfortable addressing child maltreatment. Aside from the possible forensic implications, the heart of this work is primarily about helping families take adequate or good care of their children. Indeed, helping address child abuse and neglect also helps promote children’s health, development, and safety, and it is central to the rich mandate of Pediatrics.

Previous editions of this book have been greeted with great acclaim. This edition reflects the past decade’s advances in research and techniques, and includes contributions from experts on every aspect of child abuse.
