Television sports production is difficult, and producing a remote sports event is arguably the most complicated to orchestrate. Many factors can adversely affect your production, including weather, lighting, and natural sound. A successful production is dependent on extensive planning, from budgets, technology and location to the intricacies of the sport itself. With so much at stake, why not learn from the experts? Learn television sports production from the ISB, producers of

the Olympics, who rely on the very same guide to train their own production staff. "Television Sports Production" walks you through the planning, set-up, directing, announcing, and editing involved with producing an event. Detailed descriptions of mobile units/OB vans, cameras, audio equipment and lighting requirements enable you to produce live or taped coverage of sporting events like an expert. You'll learn about the special considerations involved with producing various types of sports--from camera placement in figure skating to where to put the microphone during a tennis match. Whether producing a local high school football game, the Super Bowl, or something as complex as the Olympics, this

- transistors. This evolution, exemplified by a number of academic and commercial computing machines, yielded significant performance improvements and more storage leading to more effective utilization. These features would drive the development of programming languages and system software that would enhance the usability of the machines to solve more complex problems in both business, government, and scientific domains. The machines described in this volume represent the leading edge of the transition to second generation computer systems. They introduce a number of key technology concepts in computer

***Northrop's T-38 Talon was the world's first supersonic trainer aircraft, and remains in service today in air forces worldwide. It entered service in 1961, and quickly set climb records, earning it the nickname 'white rocket'. Nearly 1200 Talons were produced before the last one rolled off the assembly line in 1972. Capable of a speed of Mach 1.3, and a climb rate approaching 34,000 feet per minute, the T-38's performance was sufficient to warrant service as the USAF Thunderbirds' aircraft in the mid-1970s. Its primary role however, was as a dedicated training and proficiency platform. More than 50,000 USAF,***

*diagnostic and therapeutic concepts and current controversial issues in the management of primary and secondary brain tumors. In the first part, the latest technical developments in neuro-oncology are presented. These include the evaluation of positron-emission tomography for diagnosis, and neuronavigation and operative mapping for operation planning. Innovations in computer-assisted 3-D radiotherapy planning and in image fusioning of CT, MRT, SPECT and PET are also described. A large section of the book is devoted to the diagnosis and interdisciplinary treatment of glioblastoma, one of the most frequently occurring brain tumors. In-depth coverage is given to pathological differential*

*diagnosis, operative standards and the results of radiotherapy. A detailed presentation of the current chemotherapeutic strategies as well as their evaluation within an interdisciplinary therapy concept is also provided. A special chapter focuses on the role of radiotherapy and neurosurgery in the treatment of craniopharyngioma. The final section features discussions on the therapeutic options for brain metastases. Individual indications for both whole-brain irradiation and radiosurgery are given and compared with neurosurgical intervention. New experimental chemotherapies are considered, and finally, the palliative use of chemotherapy is examined. In summary, this book provides an*
