*Applied ethics is a field of ethics that deals with ethical questions specific to a professional, disciplinary, or practical field. There is ample literature available on ethics but there is scarcity of literature as how to apply the principles of ethics in solving the problems of contemporary world. The main objective of the book is how to apply principles and theories*

*of ethics in day-to-day life in our ordinary business of life. There are numerous dimensions of ethics but it is not possible to discuss all of them. Some important subsets of applied ethics are discussed in the book. First, what are the principles of ethics and how ethics is associated with religion, law, science and technology? Second, the present world is facing grave issues such as climate change, population explosion,*

In a pre-industrial world, storage could make or break farmers and

empires alike. How did it shape the Roman empire? The Socio-Economics of Roman Storage cuts across the scales of farmer and state to trace the practical and moral reverberations of storage from villas in Italy to silos in Gaul, and from houses in Pompeii to warehouses in Ostia. Following on from the material turn, an abstract notion of 'surplus' makes way for an emphasis on storage's material transformations (e.g. wine fermenting; grain degrading; assemblages forming), which actively shuffle social relations and economic possibilities, and are a sensitive indicator of changing mentalities. This archaeological study tackles key topics, including the moral resonance of agricultural storage; storage as both a shared and a contested concern during and after conquest; the geography of knowledge in domestic settings; the supply of the metropolis of Rome; and the question of how empires scale up. It will be of

consumer. Part one considers the impact of refrigeration on meat quality. There are chapters on the microbiology of refrigerated meat and its influence on shelf-life, drip production, weight loss and the effect of refrigeration on colour and texture. Part two looks at best practice in managing the cold chain from carcass to consumer. The authors discuss primary chilling, freezing, thawing and tempering, transport, storage, retail display and consumer handling. Part three of the book looks at aspects of process control, including chapters on such issues as temperature measurement, the design and optimal use of refrigeration systems. Both authoritative and practical, Meat refrigeration is a standard work for all those wishing to maximise the quality of refrigerated meat. the management of the cold chain from carcass to consumer Demand for organically produced animal products has dramatically increased in Europe over recent years. This book reports the outcomes of a conference on the production of Organic Meat and Milk from Ruminants, that was held in Athens in October 2001. The topics presented range from the current and future state of the markets for such products, the legislation associated with their production, the health issues that arise from it and the impact of organic agriculture on farming systems and socio-economic structures. Contributors addressing these topics include leading scientists from Europe, and this book will be of particular interest to researchers, professionals and producers who deal with the challenge of organic meat and milk production from ruminants.
