A Handbook for Supplementary Aids and Services will be useful to regular and special education teachers, related service providers (e.g., speech and language, physical and occupational therapy, etc.), school personnel, psychologists, IEP team members, and parents in the development, implementation and review of individualized education programs (IEPs). Public law 105-17 (the IDEA amendments of 1997) has reemphasized the importance of participation in the regular classroom and in the general curriculum. In order to maximize the participation of children with disabilities with children who are not disabled, Supplementary Aids and Services are now a required element of a child's IEP. Of the three services which must be specified in every child's IEP (special education related services and Supplementary Aids and Services), Supplementary Aids and Services are the least defined. Nonetheless, Supplementary Aids and Services are the key to mainstreaming and inclusion and provide the basic test when determining 'the maximum extent appropriate' a child with a disability

can be educated with children who are not disabled. This book attempts to fulfill this need by providing guidance based on best practice, the law and current research concerning the meaning and implementation of Supplementary Aids and Services. The book is composed of ten chapters. The first three chapters deal with the need to provide a free appropriate public education (FAPE), the various services required by IDEA, and the importance of regular classroom placements. Chapters Four, Five and Six detail the full range of Supplementary Aids and Services, the continuum of alternative placements that must be provided by schools, and methods for providing the least restrictive environment (LRE) requirement. Chapter Seven presents methods for including Supplementary Aids and Services in a child's IEP and related matters concerning IEP documentation. Chapters Eight and Nine describe direct and indirect teaching services that will enable a child with a disability to participate in the regular classroom. Chapter Ten focuses on assistive technology services, devices and aids that can be

used in conjunction with special education, related services and Supplementary Aids and Services to enable successful regular classroom participation.

Speech-Language pathologists have long been involved in providing services to children with communication disorders in the schools. However, a number of recent events have altered the practice environment, including changes in national and state legislation, shifting demographics, an increase in the severity of disorders encountered, advances in technology, and a move toward curriculum-based assessment. The new edition of Speech, Language and Hearing Programs in Schools: A Guide for Studens and Practitioners reflects these events. The new editors -- contributors to the first edtion -- have substantially updated and revised all chapters and have added new material on the re-authorization of IDEA, literacy acquisition, pediatric dysphagia, children from culturally diverse backgrounds who

are increasingly represented in speech-language pathology
caseloads, and much more. The book also includes chapter
objectives, case studies, and Internet resources, and is
supplemented by an instructor's manual.

The Answer Book on Individualized Education Programs

*With many children who are deaf or hard of hearing now integrated in
mainstream classroom settings, speech-language pathologists and
school-based clinicians are encountering this population in growing
numbers. This book is designed to help clinicians who may have little
or no experience with this population to understand its unique*

communication needs and develop clinical skills for working with them. It takes a holistic view of children who are deaf or hard of hearing and stresses the child as a communicator rather than focusing on the disorder itself, and provides a useful framework for viewing and assessing children's communication abilities and goals at all stages of language development. It also includes specific assessment and treatment techniques to help develop and improve communication skills in order to maximize this populations' potential for learning. This is the first book in this field to examine computers and their impact on the study and practice of speech-language pathology and audiology. This book introduces readers to the multitude of ways that speech-language pathologists and audiologists have used computers to provide clinical services more efficiently and more cost-effectively. With this information, readers will better be able to adequately promote the welfare of the persons they serve professionally in the managed health care, cost-containment environment in which they practice. For professionals working in the fields of audiology, speech-language pathology and deaf education.
