

History Of Architecture Ii

Deep within an inner cave (guhahitam) of our existence remains our potential Divinity. It is the place where our reflected sentient being (the First Bird) is trying to probe into to recover the hidden sun. The allegory is evident in the parable of the Cave once preached by the Upanishads and later by the Greek philosopher Plato. The probe is to push forward the First Bird to surge higher in the resplendent celestial blue under the full radiance of the Solar world, which is the Second, resulting in an explosion of an infinite all-pervading Divinity. Till the union and the rapture is attained, there are the two Birds - one, the psychic being, which is within us and the other one, which is the direct portion of the Divine. The direct portion is constantly trying to guide and work within us, so that evolution goes on and on. In the words of Sri Aurobindo, it is the Çhaitya Purusha, the direct portion of the Divine in the human, which is working incessantly till the rapture is activated. Ancient roots are evident in the ancient Swetaswatara Upanishad hailed by the primordial Sage Kapila and coded originally in a later text called the Bhagabat Purana, The Çhaitya Purusha is also the being that is behind the Chitta, Sri Aurobindo says. Millenniums later, the inspired Architects in the most ancient of all Buddhist ages had carved out the sacred idea in form of rock-cut expressions called the Chaitya hall. As the Mahayana Sutra of

the foremost Shurangama at the Crown of the Great Buddha says: ...the way of practicing the Samadhi is not singular and its actual method of cultivation depends upon the functioning of mind and mental concomitants (Citta-Chaitya pravritti) of each being and their interconnectedness (Mahat)... It is in the recovery or a re-tracing of the two as a DIVINITY that is originally ONE, an individual's journey called evolution and a collective journey called civilization itself are sustained. It is also from the deeper embedded patterns of this journey the gems of the system's foundation can be quarried.

A System's Evaluation of Global History of Indian Architecture

What is the place of architecture in the history of art? Why has it been at times central to the discipline, and at other times seemingly so marginal? What is its place now? Many

disciplines have a stake in the history of architecture – sociology, anthropology, human geography, to name a few. This book deals with perhaps the most influential tradition of all – art history – examining how the relation between the disciplines of art history and architectural history has waxed and waned over the last one hundred and fifty years. In this highly original study, Mark Crinson and Richard J. Williams point to a decline in the importance attributed to the role of architecture in art history over the last century – which has happened without crisis or self-reflection. The book explores the problem in relation to key art historical approaches, from formalism, to feminism, to the social history of art, and in key institutions from the Museum of Modern Art, to the journal *October*. Among the key thinkers explored are Banham, Baxandall, Giedion, Panofsky, Pevsner, Pollock, Riegl, Rowe, Steinberg, Wittkower and Wölfflin. The book will provoke debate on the historiography and present state of the discipline of art history, and it makes a powerful case for the reconsideration of

architecture.

A History of Western Architecture

This important addition to the literature is the first overall study of the architecture of Norman England since Sir Alfred Clapham's *English Romanesque Architecture after the Conquest* (1934). Eric Fernie, a recognized authority on the subject, begins with an overview of the architecture of the period, paying special attention to the importance of the architectural evidence for an understanding of the Norman Conquest. The second part, the core of the book, is an examination of the buildings defined by their function, as castles, halls, and chamber blocks, cathedrals, abbeys, and collegiate churches, monastic buildings, parish churches, and palace chapels. The third part is a reference guide to the elements which make up the buildings, such as apses, passages, vaults, galleries, and decorative features, and the fourth offers an account of the processes by which they were planned and constructed. This book contains powerful new ideas that will affect the way in which we look at and analyze these buildings.

The Architecture of Art History

Montage has been hailed as one of the key structural principles of modernity, yet its importance to the history of modern thought about cities and their architecture has never been adequately explored. In this groundbreaking new work, Martino Stierli charts the history of montage in late 19th-century urban and architectural contexts, its application by the early 20th-century avant-gardes, and its eventual appropriation in the postmodern period. With chapters focusing on photomontage, the film theories of Sergei Eisenstein, Mies van der Rohe's spatial experiments, and Rem Koolhaas's use of literary montage in his seminal manifesto *Delirious New York* (1978), Stierli demonstrates the centrality of montage in modern explorations of space, and in conceiving and representing the contemporary city. Beautifully illustrated, this interdisciplinary book looks at architecture, photography, film, literature, and visual culture, featuring works by artists

and architects including Mies, Koolhaas, Paul Citroen, George Grosz, Hannah Höch, El Lissitzky, and Le Corbusier.
