An analysis of the construction of masculinity in early Soviet culture that finds in the novels of Babel and others an utopian society composed exclusively of men.

Reimagining Communication: Mediation explores information and media technologies across a variety of contemporary platforms, uses, content variations, audiences, and professional roles. A diverse body of contributions in this unique interdisciplinary resource offers perspectives on digital games, social media, photography, and more. The volume is organized to reflect a pedagogical approach of carefully laddered and sequenced topics, which supports experiential, project-based learning in addition to a course's traditional writing requirements. As the field of Communication Studies has been continuously growing and reaching new horizons, this volume synthesizes the complex relationship of communication to media technologies and its forms in a uniquely accessible and engaging way. This is an essential introductory text for advanced undergraduate and graduate students and scholars of communication, broadcast media, and interactive technologies, with an interdisciplinary focus and an emphasis on the integration of new technologies.

The first volume of this series surveyed the great world dramatists to gather concepts and ideas to apply to the real stage, which is the universe God has made and centered into himself as an actor. This volume describes the actors, the dramatis personae. This is his theological anthropology concerning man, his freedom and destiny in the light of biblical revelation. Von Balthasar is concerned here with the dramatic character of existence as a whole, approaching the topic through a consideration of the various conditions and situations of mankind as a drama that involves both the Creator and his creatures.

The two-volume set LNCS 3522 and 3523 constitutes the refereed proceedings of the Second Iberian Conference on Pattern Recognition and Image Analysis, IbPRIA 2005, held in Estoril, Portugal in June 2005. The 170 revised full papers presented were carefully reviewed and selected from 292 submissions. The papers are organized in topical sections on computer vision, shape and matching, image and video processing, image and video coding, face recognition, human activity analysis, surveillance, robotics, hardware architectures, statistical pattern recognition, syntactical pattern recognition, image analysis, document analysis, bioinformatics, medical imaging, biometrics, speech recognition, natural language analysis, and applications.

The sinuous form and peculiar evolution of meandering rivers has long captured the imagination of people. Today, meandering rivers exist in some of the most densely populated areas in the World, where they provide environmental and economic wealth and opportunities, as well as posing hazards. Through geological time, the ancestors of these modern meanders built deposits that are now host to mineral resources, groundwater, and hydrocarbons. This Special Publication illustrates the breadth of current research on meandering rivers and their deposits. The collection of research papers demonstrates the state of science on fluvial process-product relationships. The articles cover fundamental and applied studies of both modern and ancient rivers, are based on state-of-the-art technology, include complementary philosophical approaches, and span a wide range of spatial and temporal scales. This book includes some of the most recent advances in the study of the morphodynamics and sedimentology of meandering rivers, and is an important resource for those who want to investigate fluvial systems and their deposits.

This is a rhetorical exploration of Malcolm Lowry's novel Under the Volcano, which seeks to elucidate the techniques that Lowry employed to amplify the fragmentation of the Consul and his world. It offers a critical examination of the book, on a chapter-by-chapter basis, for its techniques, themes and sources. This study seeks to provide a synthesis of what has been thought and said about the novel. It also contains a comprehensive bibliography of other critical studies of Under the Volcano (including book reviews).

This book, the second of two volumes, offers a comprehensive profiling of the theology contained in the Old Testament. The Old Testament Library provides fresh and authoritative treatments of important aspects of Old Testament study through commentaries and general surveys. The contributors are scholars of international standing.

Everyone has a view about animal ethics. Each of us, for example, has an opinion about whether we should eat meat, whether animals should be used for scientific research, or whether the use of animals in sport is acceptable. But very few of us stop to wonder about the basis of our views, or to rationalize them. In this book, Madeleine Campbell aims to enable us to do so, by addressing a series of questions, such as: when does animal use become abuse; why do we treat some animals differently from others; are there some things which we should never do to animals; and just because we can, should we? Drawing on her experience as a veterinarian, a researcher, and more, the author takes ethical argument beyond academia and applies it to the question which currently dominates societal debate about human-animal interactions: what (if anything) is a reasonable use of an animal? *Animals, Ethics, and Us* offers a stripped back, balanced and moderate perspective, based on logical argument, philosophical principles, and sound science. It is a thought-provoking read aimed at a broad readership, including informed owners and animal enthusiasts, as well as useful a primer for students of animal ethics, welfare, and veterinary medicine.

Erik Satie (1866-1925) was a quirky, innovative and enigmatic composer whose impact has spread far beyond the musical world. As an artist active in several spheres - from cabaret to religion, from calligraphy to poetry and playwriting - and collaborator with some of the leading avant-garde figures of the day, including Cocteau, Picasso, Diaghilev and René Clair, he was one of few genuinely cross-disciplinary composers. His artistic activity, during a tumultuous time in the Parisian art world,

situates him in an especially exciting period, and his friendships with Debussy, Stravinsky and others place him at the centre of French musical life. He was a unique figure whose art is immediately recognisable, whatever the medium he employed. Erik Satie: Music, Art and Literature explores many aspects of Satie's creativity to give a full picture of this most multifaceted of composers. The focus is on Satie's philosophy and psychology revealed through his music; Satie's interest in and participation in artistic media other than music, and Satie's collaborations with other artists. This book is therefore essential reading for anyone interested in the French musical and cultural scene of the late nineteenth and early twentieth century.

"The text of the book is supported by more than fifty illustrations. Some are Jarry's own and some are those of contemporaries, such as Aubrey Beardsley, Emile Bernard, Pierre Bonnard, Max Elskamp, Charles Filiger, Paul Gauguin, Gerhard Munthe, Henri Rousseau, and Felix Vallotton. Others relate to an iconic intertext, hitherto unexplored. Alfred Jarry: An Imagination in Revolt sheds light on an underresearched area of fin-de-siecle French culture and art history, establishing Jarry's role as a major figure in the origins of modernism."--Jacket.

Authored by world experts, the Handbook of Food Processing, Two-Volume Set discusses the basic principles and applications of major commercial food processing technologies. The handbook discusses food preservation processes, including blanching, pasteurization, chilling, freezing, aseptic packaging, and non-thermal food processing. It describes com

The book post harvest technology assumes great attention during recent years since preservation of agricultural produce is a basic necessity to sustain agricultural production. It helps to add value of produce, thus having great scope for employment generation at the production catchments. In this book, the authors have attempted to consolidate different methods of post harvest technology of fruits and vegetables focusing on recent advances. This book will benefit both practicing food technologist/post harvest technologist who are searching for answers to critical technical questions of post harvest technology. Further, it will be useful to agricultural engineers, food processors, food scientist, researchers and progressive farmers and tom those who are working in relevant fields. it is intended to fill a gap in presently available post harvest technology literature

Alison Bechdel's Fun Home: A Family Tragicomic has quickly joined the ranks of celebrated literary graphic novels. Set in part at a family-run funeral home, the book explores Alison's complicated relationship with her father, a closeted gay man. Amid the tensions of her home life, Alison discovers her own lesbian sexuality and her talent for drawing. The coming-of-age story and graphic format appeal to students. However, the book's nonlinear structure; intertextuality with modernist novels, Greek myths, and other works; and frank representations of sexuality and death present challenges in the classroom. This volume offers strategies for teaching Fun Home in a variety of courses, including literature, women's and gender studies, art, and education. Part 1, "Materials," outlines the text's literary, historical, and theoretical allusions. The essays of part 2, "Approaches," emphasize the work's genres, including autobiography and graphic narrative, as well as its psychological dimensions, including trauma, disability, and queer identity. The essays give options for reading Fun Home along with Bechdel's letters and drafts; her long-running comic strip, Dykes to Watch Out For; the Broadway musical adaptation of the book; and other stories of LGBTQ lives.

A complete guide to the history, form and contexts of the genre, Autobiographical Comics helps readers explore the increasingly popular genre of graphic life writing. In an accessible and easy-to-navigate format, the book covers such topics as: · The history and rise of autobiographical comics · Cultural contexts · Key texts – including Maus, Robert Crumb, Persepolis, Fun Home, and American Splendor · Important theoretical and critical approaches to autobiographical comics Autobiographical Comics includes a glossary of crucial critical terms, annotated guides to further reading and online resources and discussion questions to help students and readers develop their understanding of the genre and pursue independent study.

Contributions by Paul Fisher Davies, Lisa DeTora, Yasemin J. Erden, Adam Gearey, Thomas Giddens, Peter Goodrich, Maggie Gray, Matthew J. A. Green, Vladislav Maksimov, Timothy D. Peters, Christopher Pizzino, Nicola Streeten, and Lydia Wysocki Recent decades have seen comics studies blossom, but within the ecosystems of this growth, dominant assumptions have taken root—assumptions around the particular methods used to approach the comics form, the ways we should read comics, how its "system" works, and the disciplinary relationships that

surround this evolving area of study. But other perspectives have also begun to flourish. These approaches question the reliance on structural linguistics and the tools of English and cultural studies in the examination and understanding of comics. In this edited collection, scholars from a variety of disciplines examine comics by addressing materiality and form as well as the wider economic and political contexts of comics' creation and reception. Through this lens, influenced by poststructuralist theories, contributors explore and elaborate other possibilities for working with comics as a critical resource, consolidating the emergence of these alternative modes of engagement in a single text. This opens comics studies to a wider array of resources, perspectives, and modes of engagement. Included in this volume are essays on a range of comics and illustrations as well as considerations of such popular comics as *Deadpool*, *Daredevil*, and *V for Vendetta*, and analyses of comics production, medical illustrations, and original comics. Some contributions even unfold in the form of comics panels.

In *Abnormal Psychology*, best-selling author William J. Ray brings together current perspectives concerning the manner in which the human mind, behavior, and experience can be understood. In addition to the traditional psychological literature, this book draws from work in the cognitive and affective neurosciences, epidemiology, ethology, and genetics. Ray focuses on unifying and integrating the biopsychosocial understandings of human behavior within a broader consideration of human culture and language as it applies to abnormal psychology. With coverage of DSM-5, ICD-11, and RDoC, the fully revised Third Edition puts even greater emphasis on the range of human experiences and medical comorbidities and includes additional references to representations of mental health in popular culture to connect readers with familiar examples. "This book is MacDonald's magnum opus: it represents a deep immersion in and advocacy for independent, experimental cinema."--Patricia R. Zimmerman, author of "States of Emergency: Documentaries, Wars, Democracies" "This is a brilliant study--learned, authoritative, and often eloquent. One reads this book with astonishment at the wealth of thoughtful and playful and provocative work that has occurred in this medium--and astonishment too that most scholars of environmental literature and nature in the visual arts have had minimal contact with independent film and video. MacDonald provides an immensely valuable, readable overview of this field, profoundly relevant to my own work and that of many other contemporary ecocritics."--Scott Slovic, editor of "ISLE: Interdisciplinary Studies in Literature and Environment " ""The Garden in the Machine" is clearly MacDonald's major work. It is very original and wide reaching especially in its analysis of the relationship of American avant-garde films to the poetry and painting of the native landscape.

MacDonald's authority is evident everywhere: he probably knows more about most of the films he discusses than anyone alive."--P. Adams Sitney, author of "Modernist Montage: The Obscurity of Vision in Cinema and Literature " ""The Garden in the Machine" reflects Scott MacDonald's career-long lived engagement with avant-garde film and filmmakers. With deep respect for the artists and a rich, wide-ranging curiosity about the cultural histories that inform these films, MacDonald makes a powerful argument for why they should be screened, taught, and discussed within the wider context of American Studies. Throughout, MacDonald analyzes themes of race, history, personal and public memory, and the central role of avant-garde films in shaping our possible futures."--Angela Miller, author of "Empire of the Eye: Landscape Representation and American Cultural Politics, 1825-1875 "

The first edition of *Food Processing Technology* was quickly adopted as the standard text by many food science

and technology courses. While keeping with the practice of covering the wide range of food processing techniques, this new edition has been substantially expanded to take account of the advances in technology that have taken place since the publication of the first edition. The Second Edition includes new chapters on computer control of processing, novel 'minimal' technologies, and Ohmic heating, and an extended chapter on modified atmosphere packaging. It is a comprehensive - yet basic - text that offers an overview of most unit operations, while at the same time providing details of the processing equipment, operating conditions and the effects of processing on the biochemistry of foods. The book is divided into five parts, in which unit operations are grouped according to the nature of the heat transfer that takes place. Each chapter describes the formulae required for calculation of processing parameters, sample problems, and the effects on sensory characteristics and nutritional properties of selected foods. By combining food processing theory and calculations with descriptions of commercial practice and results of scientific studies, Food Processing Technology: Principles and Practice, Second Edition helps readers make attractive saleable products and extend the shelf-life of foods.
