Acute Care Nursing provides an accessible and practical overview of the role of the nurse in acute medical and surgical settings in the Australian and New Zealand context. Linking closely with the Australian 'Registered nurse standards for practice' and the New Zealand Competencies for Registered Nurses, this text equips students with foundational knowledge of the pathophysiology, treatment and legal and ethical issues associated with common acute conditions. Through the person-centred, collaborative care approach, students will also learn effective communication, decision-making and cultural competency skills that are essential for nurses in any practice context. Each chapter is enriched with pedagogical features designed to solidify understanding and promote critical thinking, including case studies, reflections, key terms, review questions, research topics and further readings. Offering students a relevant and contemporary understanding of the acute care context, Acute Care Nursing is an essential companion that can be taken from the classroom into practice.

This is the premier evidence-based textbook in critical care medicine. The Third Edition features updated and revised chapters, numerous new references, streamlined content, and new chapters on key topics such as the new paradigm in critical care medicine, cardiac output monitoring, surgical optimization, vital signs, and arterial blood gas analysis. This book presents to all those who are interested in the history of Anaesthesiology historical information on the development of anaesthesiology in Germany and the remarkable growth of the German Society. At the founding session of the German Society of Anaesthesia in Munich on 10 April 1952, 100 persons had signed the founding documents. Today about 12,000 anaesthetists are members of the German Society of Anaesthesiology and Intensive Care Medicine, making the DGAI the biggest society within ESA. Well known are the pioneering contributions of German scientists and surgeons to the development of general, regional and local anaesthesia during the 19th and the beginning of the 20th centuries. But less known outside Germany are the reasons for the delayed evolution of anaesthesiology as a specialty of its own in German medicine, far later than in the UK, Scandinavia and the USA. In this book you will find answers to this question and detailed information on the social and medical evolution of anaesthesiology especially at the Faculties of Medicine at German universities.

My writing of this book has evolved over the past thirty-six years of professional nursing practice. My first efforts as an author, which were published in 2013: Promoting a Culture of Safety: Preventing Central Line Infections in Weill Cornell Medical Center, which used a performance improvement process to lower the rate at which critically ill patients in cardiac care developed central line infections, and Factors Influencing Critical Nurses' Perception of their Overall Job Satisfaction: An Empirical Study, which used a correctional approach and was statistically analyzed to determine the perception of critical-care nurses of their manager's leadership style and its effect on their job satisfaction. Having been on the receiving end of leadership behaviors gave me a firsthand opportunity to observe these diverse nurse leaders at both extremes of the spectrum from laissez-faire leadership style to dictatorial leadership style and everything in between. Each encounter has enriched me immeasurably. My personal and professional experiences, as well as the knowledge I gained from completing my dissertation, all compelled me to write this book to share with novice managers aspiring for a leadership role an awareness and provide them with some valuable information on how they forge their career paths into a leadership role, knowing that one of the keys to effective leadership is the ability to stay intellectually curious and committed to learning with the understanding that new knowledge can come from variety of sources and to make it a point of duty to be always on the lookout for new knowledge.

This popular reference provides a comprehensive review for the nurses preparing for critical care certification through the CCRN exam and those who wish to keep apprised of the current updates in the field.

Critical Care Nutrition Therapy for Non-nutritionists

A Practical Guide

This book offers a pragmatic approach to day-to-day metabolic and nutritional care based on physiological considerations. Due to the numerous controversial trials published in the last 15 years, there is no clear guidance for intensive care physicians regarding the metabolic and nutritional management of patients. This has resulted in a return to underfeeding and related complications in most ICUs worldwide as shown by the latest Nutrition Day data. Using a structured, logical approach, the book examines practical solutions for artificial feeding in complex areas of critical care (brain injuries, burns, cardiac failure, ECMO, intestinal failure, long term patient, renal failure, metabolic diseases, obesity, old patients) and discusses measurement of the results of metabolic interventions. It also includes dedicated chapters focusing on specific problems, in order to avoid complications. Critical Care Nutrition Therapy for Non-nutritionists is a valuable resource for all general ICUs and ICU subspecialties such as cardiovascular, neuro, gastrointestinal and burns ICUs.

This book provides a comprehensive overview of improving critical care survivorship. Comprised of four sections, the text presents interventions that can be used to improve patient outcomes and reduce the burden of post-intensive care syndrome across the arc of care, from the ICU to returning home. The first section of the text focuses on preventing adverse outcomes in the ICU, with an emphasis on implementing early mobilization, engaging and supporting families, and employing various forms of therapy. The second section revolves around enhancing recovery post-ICU, focusing on physical and neurocognitive rehabilitation programs, peer support, and poly-pharmacy management. Community reintegration is the subject of the third section, with emphasis on socioeconomic reintegration, healthcare utilization, and volunteerism in ICU recovery. The book concludes with a section on future considerations, specifically spotlighting preliminary ideas that address long-term sequelae and international collaboration to solve critical care challenges.
