Communication Research: Asking Questions, Finding Answers covers basic research issues and processes, both quantitative and qualitative, appropriate for communication students with little or no previous research methods experience. The text's guiding principle is that methodological choices are made from one's research questions or hypotheses. This avoids the pitfall in which students learn one methodology or one methodological skill and then force that method to answer all types of questions. Instead of working with one methodology to answer all types of questions, students come away understanding a variety of methods and how to apply them appropriately.

There is a large and growing number of excellent books on physics and sports. While these books are well written, educational, and often entertaining, they are simply not textbooks. Physics concepts such as: force, velocity, and torque, come into the discussion.

Interesting facts are given, and occasionally a formula is applied. However, the focus is typically on conveying interesting physics related facts about a particular sport, rather than developing a general appreciation and facility for scientific reasoning. The Physics of Sports is intended as a textbook for a 1 semester or a 1-2 quarter undergraduate course, for students - not necessarily intending to major in Physical Science, Engineering, or a related field. With this course, it is hoped that a student's natural interest in athletics and the direct relevance to concrete material will bridge the gap for students, turned off by the seemingly abstract stuff

Engineering Fundamentals & Problem Solving presents a complete introduction into the engineering field and remains the most comprehensive textbook for an introductory engineering course. This text will help students develop the skills needed to solve open-ended problems in SI and customary units while presenting solutions in a logical manner. Students are introduced to subject areas, common to engineering disciplines, that require the application of fundamental engineering concepts. Engineering Fundamentals & Problem Solving provides students a realistic opportunity to learn to apply engineering principles to the solution of engineering problems. Furthermore, the author's approach keeps students on task toward an engineering career by showing how the materials apply to the student's

Managerial Accounting for Managers, 4th edition by Noreen/Brewer/Garrison is based on the market-leading managerial accounting solution, Managerial Accounting, by Garrison, Noreen and Brewer. The Noreen solution presents integrated and proven solutions designed to help attain course goals of student readiness, comprehension of content, and application of key concepts in the managerial accounting course, while addressing the needs of

instructors who do not wish to teach the financial accounting-oriented content that is included in the Garrison solution (no debits/credits). Of the three programs in the Garrison franchise (the Brewer solution, the Garrison solution, and the Noreen solution), the Noreen solution is the most pure management accounting content. The other two programs contain greater coverage of financial accounting topics. Managerial Accounting for Managers 4e is geared towards professors who love Garrison's market-leading managerial accounting content but prefer to approach their course by eliminating the debits and credits coverage. The Noreen solution includes the managerial accounting topics such as Relevant Costs for Decision Making, Capital Budgeting Decisions, and Segment Reporting and Decentralization, however, the job-order costing chapter has been extensively rewritten to remove all journal entries. Furthermore, the chapters dealing with process costing, the statement of cash flows, and financial statement analysis have been dropped to enable professors

"First of all, the field of finance has become much more analytical, with the emphasis on decision-oriented approaches to problems rather than the old, descriptive approach. We have increased the use of analytical approaches to financial problems in virtually every chapter of the book. But we also have stayed with our basic mission of making sure students are able to follow us in our discussions throughout the text. While the 18th edition is considerably more sophisticated than the initial edition, it is still extremely "reader friendly." As the analytical skills demanded of students have increased, so has the authors' care in presenting the material. The use of spreadsheets and calculators has become considerably more important, and this is also reflected in the 18th edition where we have added Excel tables and calculator keystroke solutions within key chapters. We offer Web Exercises at the end of every chapter, URL citations throughout the text, a library of course materials for students and faculty, computerized testing software and PowerPoint® for the faculty, McGraw Hill Connect®, an online assignment and assessment solution, and SmartBook, a truly innovative adaptive study tool and eBook"--

The Second European Edition of *Services Marketing: Integrating Customer Focus Across the Firm* by Wilson, Zeithaml, Bitner and Gremler uniquely focuses on the development of customer relationships through quality service. Reflecting the increasing importance of the service economy, *Services Marketing* is the only text that put the customer's experience of services at the centre of its approach. The core theories, concepts and frameworks are retained, and specifically the gaps model, a popular feature of the book. The text moves from the foundations of services marketing before introducing the gaps model and demonstrating its application to services marketing. In the second edition, the book takes on more European and International contexts to reflect the needs of courses, lecturers and students. The second edition builds on the wealth of European and International examples, cases, and research in the first edition, offering more integration of European content. It has also been fully updated with the latest research to ensure that it continues to be seen as the text covering the very latest services marketing thinking. In addition, the cases section has been thoroughly examined and revised to offer a range of new case studies with a European and global focus. The online resources have also been fully revised and updated providing an excellent package of support for lecturers and students.
