Metonymy and Language presents a new theory of language and communication in which the central focus is on the concept of metonymy, the recognition of partial matches and overlaps. Through the use of original data sets and rigorous primary research, Denroche characterizes metonymy as key to understanding why language is so "fit for purpose" and how it achieves such great subtlety and flexibility. This study develops the notion of "metonymic competence" and demonstrates that metonymic behavior is often pursued for its own sake in recreational activities, such as quizzes, puzzles and play, and shows the possible impact of the application of metonymic processing theory to professional fields, such as language teaching and translator training. Furthermore, it proposes a research approach with metonymy at its center, "metonymics," which Denroche suggests could provide a powerful framework for addressing issues in numerous fields of practice in the arts and sciences.

This book introduces the theoretical and empirical bases for the definition of language learning level in functional 'Can Do' terms for the English Profile Programme, setting out the ambitions of the Programme and presenting emerging findings. The English Profile Programme is an elaboration of the performance level descriptions of the Common European Framework of Reference for Languages (CEFR) that is concerned specifically with the English language. The CEFR has become influential in building a shared understanding of performance levels for foreign language learners. However, there is a considerable

gap between the broad descriptions of levels provided, which covers a range of languages and learning contexts, and the level of detail required for applications such as syllabus or test design, which this volume addresses. With its combination of theoretical insights and practical advice, this is a useful work for academics, policy-makers, curriculum designers, textbook writers, postgraduate students and examination board staff.

The Grammar and Lexis of Conversational Informal English in Advanced Textbooks defends the view that the acquisition of conversational English depends highly on the kind of materials available to L2 learners. The need to acquire a proficient competence in English is growing exponentially in an incessantly demanding society, but it is the oral skill, and more specifically the ability to communicate in everyday situations, that learners are calling for. The current learning process, nonetheless, is not particularly effective, as is shown in the data collected by the Eurobarometer and published in June 2012, which shows that only 38% of the Europeans surveyed were able to maintain a conversation in English, although 67% believed it to be the most useful language to learn for personal development. The present study supports the idea expressed in

The Common European Framework of Reference for Languages, which states that a language is learnt reactively, following the instructions and carrying out the activities prescribed for them by teachers and by textbooks (2001: 141). Consequently, these materials should reflect the everyday use of informal discourse and allow learners to analyse, understand and interpret the different underlying messages conveyed by means of lexico-syntactic, as well as paralinguistic, elements. The book is divided into seven chapters in which various different linguistic aspects of conversation are dealt with. In the opening chapters, spoken language is presented and approached as a multidimensional entity, particularly as the sum of lexico-syntactic and socio-linguistic elements. The following chapters provide a description of the main characteristics of conversational English based on corpus-informed grammars and publications. The final chapter analyses twenty ESL textbooks in order to determine how corpus data has influenced the materials designed for the acquisition of conversational discourse."
