A Study of the Fluid Dynamics and Heat Transfer Behavior for Radially Inward Flow Over a Shrouded Rotating Disk

Catalog of Copyright Entries. Third Series

Who's who in the South and Southwest

The Ohio State University Bulletin

**Theing of radial flow gas turbine fluid dynamics and heat transfer behavior is investi gated. A test facility was constructed for the modeling of turbine flows. Several unconven tional experimental techniques were developed for use in the facility. A simple model of a radial flow gas turbine was analyzed and tested. The fluid dynamics and heat transfer behavior of a single radially inward flow of air over a shrouded rotating disk was experimentally deter mined. The fluid dynamics behavior is presented as a series of graphs detailing the velocity profiles. The heat transfer is correlated over the operating range of radial flow gas turbines by a simple algebraic relation between the governing nondimensional parameters. An analy sis is presented that does not adequately pre dict the heat transfer. The reasons for the discrepancy between analysis and experiment are discussed. (Author).**
