A Report

Of the approximately 20 million veterans of the U.S. armed forces, less than half utilize the Veteran's Health Administration health care system. That means the majority of veterans are receiving care from nurses and healthcare professionals who may not be trained in treating or caring for patients who have served in the military. This unique book guides nurses and healthcare professionals through the specific needs veterans can present, including but not limited to PTSD. Topics covered include, defining military culture and how to apply that knowledge to provide informed treatment, transitioning from service to civilian life and the many challenges expected during re-adjustment and re-entry, recognizing and treating substance use disorders, identifying suicidal behaviors and warning signs, long-term care for elderly veterans, and many more topics unique to the healthcare of veterans.
